Water Resource Consultants

Mining Hydrology

Mining Hydrology

Montgomery & Associates is a global leader in the field of mining hydrology. Our history of providing high-quality consulting services to the mining sector spans three decades and our client list includes most of the industry leaders. With two Arizona offices to serve our domestic and international clients, we also maintain a full-service office in Santiago de Chile that provides a base for much of our South American work.

At our core, Montgomery & Associates is a group of highly-experienced problem-solvers. Our professionals understand the needs and concerns of the mining sector, and leverage their experience to help clients effectively and efficiently develop new mining ventures and optimize operations at active mine sites.

In addition to our client-focused approach, Montgomery & Associates

We partner with clients to...

- ▶ Develop water supplies in hydrogeologically complex and climatically challenging environments
- ▶ Direct regional groundwater exploration programs in deep multi-aquifer systems
- ▶ Design innovative analytical and numerical modeling techniques to simulate steady-state and transient hydraulic regimes
- ▶ Address water quality concerns for open-pit, underground, and in-situ mining operations
- ▶ Interpret satellite imagery to investigate geologic structural conditions and evaluate environmental changes in ecologically sensitive areas
- ▶ Deploy rugged field instrumentation to measure hydraulic, hydrochemical, and atmospheric parameters
- ▶ Develop innovative monitoring programs for site characterization
- ▶ Prepare applications and provide technical support for environmental permitting and compliance
- ▶ Build and maintain environmental databases

is proud of its track-record in facilitating positive interactions with regulatory agencies, assisting with public outreach, and, where necessary, supporting productive litigation proceedings.
